Hello,

I am e-mailing as a resident of Milwaukee county and want to start off by stating WE DO NOT NEED NOR WANT ANOTHER AI DATA CENTER!!

Energy costs are on the rise and the possibility of a nationwide water shortage continues to accelerate every time a new data center is built. Most of these homes and businesses surrounding this asinine proposal need running water to function and building a data center will surely deplete everyone's basic resources. Most residents can barely afford their energy bills now and data centers have proven time and time again to spike energy costs and stick those bills to the families who will suffer the most. Data centers are also notorious for noise, water, and air pollution and will continue to make the water and environment around this community toxic and unlivable by significantly decreasing people's quality of life.

Data centers are also massive business failures and end up costing the business far more money than any retention or profits you selfishly hope to gain from this. Data centers and Ai are actively bankrupting businesses while many are trying to shift away from using it altogether knowing the negative environmental and financial impact it is causing.

Let me be CRYSTAL CLEAR when I say this community does NOT want a data center, especially when this data center will cost people their jobs and their lives. You are intentionally targeting lower income neighborhoods because you view our lives as disposable. There is no demand or need for a new data center and we the people will continue to make this absolutely understood. We don't need mass surveillance and constant waste of energy. We NEED clean water and access to affordable housing and resources, none of which a data center will provide. Please think with your conscience instead of your wallet and shut down this proposal once and for all.

Keegan Murphy
