I am against the building of the data center at the Midtown Center property on N. 60th Street. Data centers regularly produce noise levels in the 92 dB range. They also produce high pitched frequencies that cannot be heard, but felt, and are known to cause adverse health effects, including dizziness, nausea, vertigo, and sleep disruption. This is in such close proximity to a residential district, and will affect everyone who lives nearby. Additionally, data centers draw lots of power, and this will drive up the cost of energy bills. This is already at a time when people are already struggling to pay their bills and put food on the table. I do not want to have my community and my personal health ruined so we can produce more AI slop. Furthermore, I am annoyed by the fact that this hearing is labeled as an emergency. Why are you trying to build a data center proposal out so fast? It seems like you are trying to rush this process to get it done before the public can comment on it. I think you know that it will harm the communities, and you know the public will be against it. But you don't care because you care more about filling your own pockets than you do about the people of Milwaukee. The actions of this committee are intentionally scummy and malicious. Shame on you.
