**5. DESCRIPTION OF PROJECT:**

- A. Describe all existing features that will be affected by proposed work. Please specify the condition of materials, design, and dimensions of each feature (additional pages may be attached)

*This project includes a compact addition to the Mitchell Street side of the existing worship structure. The purpose of the project is to provide an accessible approach and entrance into the structure. There exists approximately a 7'-0" difference in elevation from the street level to the Narthex floor level. The addition will disrupt the existing rhythm of the Mitchell Street façade at the grade level. However, it does not interrupt or modify the existing significant stain glass windows. The location of the addition not only functionally serves entrance directly into the existing Narthex; it provides a balance and symmetry to this façade in relation to an existing westerly exit.*

- B. Describe all proposed work, materials, design, dimensions and construction technique to be employed (additional pages may be attached)

*It is the intent to duplicate existing detailing, color, texture, and materials. This includes dimensional and cut stone detailing, doors, windows, and fencing/rails. Although the proportions, massing and detailing will follow the language of the Sacristy certain elements will follow that of the primary structure. This will offer a timeless presence within the context of the existing architecture.*

*The addition is approximately 18'x7'-4" wide with exterior stair and landing. The intent is to present a clearly identifiable alternative yet discrete entrance into the structure without competing with the significance of the three primary entrances along the east façade or the unique westerly exit element.*
