- Camera app for City Featured Photo Booth**
- City publishing, image and video, via secure web portal**
- No Web access and Extreme data privacy measures**

41" wide x 11.6" deep x 102" high

The Hop streetcar smart kiosk initiative will generate needed revenue to support streetcar operations while also fostering a more connected downtown community. Featuring real-time arrival info for the nearest streetcar station, a platform for public service announcements and community messaging, wayfinding information and a variety of other user amenities, the kiosks will make navigating downtown easier for residents and visitors alike. The initial deployment will include 35 kiosks located along the existing streetcar route and in strategic locations near the route meant to bridge transportation gaps in our city and support a multi-modal transit model where The Hop can be a critical link in moving people between key activity centers.

Simple, clean, intuitive navigation built specifically for each City with curated apps and city info.
