ABOUT US WHAT WE DO **ACKER COMBINATION** WINDOWS DOORS MILLWORK WINDSOR® WINDOWS PORTFOLIO

## Acker Combination

Ken Acker designed the Acker Combination Storm and Screen in 1980. His goal was to offer a storm window that was both energy efficient and convenient for any user to operate. **As a result, the Acker Combination now provides the elegance and warmth of wood, coupled with the energy efficient and environmentally responsible qualities sought by today's homeowners.** With the appearance similar to that of an old-fashioned storm sash, the Acker Combination remains true to the exterior architecture that is characteristic of older homes and buildings.

**Notable features:**

- Manufactured in Clear Northern White Pine (Other wood species available)
- Storm and Screen inserts are interchangeable from inside the home
- Insert areas are fully weather-stripped to prevent air infiltration
- Glass options: Single glazed or Insulating (LowE Optional)
- Available in most any size and window shape
- Product finishing Options: Primed and Painted or Stained and Varnished
- Available with installation by Acker Millwork Co.

\*\* Accepted by historic preservation commissions
