Re: Tenor High School Mural

Matt,

I am writing to confirm that, based on the sample applied to the building, there was no damage to the brick surface upon removal of the mural sample.

The test area was carefully installed and subsequently removed in accordance with standard procedures. Following removal, the brick substrate was inspected and found to be intact, with no visible staining, deterioration, or surface disruption.

This result indicates that the mural application method tested is compatible with the existing brick and does not adversely affect the integrity of the surface when properly removed.

Please feel free to reach out if you require any additional details or documentation.

Sincerely,

Kevin Chmielewski  
President
