Subject: Proposed Data Center

Some people who received this message don't often get email from iampurple628@gmail.com. [Learn why this is important](#)

Hello,

I just heard about the proposed data center for the city to be built on Midtown Center on N 60th & Capitol and absolutely not. We Wisconsinites are already paying the price of the data centers that have been built here and I know I'm not alone when I say I am sick to death of this entire situation. We don't need our communities to be paying more for electricity and to have resources taken from them. The environmental and health concerns that come with data centers GREATLY AND VASTLY outweighs the need for another one of these people coming in to our state and our city to make money while we pay more in multiple ways. We don't need our clean drinking water effected when we're in a global water bankruptcy, we don't need to add onto the heat these things already create, and we don't need to add onto the ways these will make us unwell as it adds onto worsening our air quality. Not to mention, this is way too close to Lake Michigan. Our Great Lakes deserve better than to be put at risk like this. Do the right thing and drop these plans immediately.

Thank you,

Kelsey Stella
