Re: U-verse Build-out Status

Dear Mr. Hadnot,

As you might recall, there was considerable interest and discussion over the scope of the U-verse roll-out in Milwaukee and its benefits for City residents when AT&T presented the company's plans for this new product offering, and the Public Works Committee remains keenly interested in the progress of this project. The Committee would like to learn the current status of AT&T's U-verse product build-out, and the number of Milwaukee residents who have or can avail themselves of the voice, data and video services provided through this product.

To this end, the Committee requests that representatives of AT&T appear before the committee on September 13, 2011, to update the City on the current availability of this product for residents, and AT&T's plans for continued build-out of the U-verse service area.

AT&T's presentation to the Committee should include any service area maps, PowerPoint presentations or other data demonstrating which City residents now have access to U-verse, and which residents will gain access in the future.

Please, contact Aaron Cadle of our Legislative Reference Bureau at 414-286-8666 to arrange the details for AT&T's visit.

Thank you for your ongoing commitment to serve the residents of the City of Milwaukee.

Sincerely yours,

Ald. Robert Bauman
Chair – Public Works Committee
