

- 1) The City needs to update the Master Property Database with the year that City-owned properties were built so that ones with possible lead service lines can be easily identified.
- 2) City-owned properties with current tenants need to be immediately inspected for lead service lines and once identified, the lead line replacement needs to be expedited.
- 3) Are new homes connecting to City-side lead service lines? The City's records and policies are unclear on this concern.
- 4) The MHD Map of Lead Poisoning Density was modified to no longer include the category of *1 – 9 lead poisoned children per square mile*. This is highly unethical and gives the false impression that the lead crisis in Milwaukee is less severe than in truly is.
- 5) We need documentation showing the locations of the 92 water main breaks that occurred in May of 2014.
- 6) Why was there never an investigation of the spike in infant deaths along W. North Ave. from 2012 to 2016? FLAC believes that these (and many other infant deaths in Milwaukee) are due to lead contamination in the water.
