Subject: Shootings on Water Street

Dear Alderman Bauman, I live at 1115 N. Edison Street just South of the Harp Bar on the River. I have had people shot directly in front of our condo, I would like to propose a possible partial solution to the gun violence problem in this area. There are a number of **discreet** gun detection systems with AI technology that can identify concealed guns on pedestrians. With this technology and person identification, the police could have probable cause to do a stop and search. This system could be paid for by the local merchants, and/or property owners in the area. Guardian and SafePointe are just two of the systems available. Gerard Randall tipped me off to these systems that were being considered by the RNC. Good luck with your meeting on Wednesday.
