Hello, I speak now as a 25 year resident of the area you're considering building the data center in. The surrounding neighborhoods are full of hard working decent older people who have built their lives on these properties and in this community. Adding this proposed data center will in fact pollute their air, increase their traffic, hinder living standards by way of constant noise other auditory factors that I'm sure the people proposing this plan wouldn't want right down the block from their homes. I remember when that plot was supposed to be turned into something positive for the kids in this community, it should not be for enriching those who contribute nothing to it. I really really really hope you hear these words and actually listen. Thank you.
