Subject: Proposed Data Center: resident concerns

[Some people who received this message don't often get email from katiegould33@gmail.com. Learn why this is important at <https://aka.ms/LearnAboutSenderIdentification>]

Hi,

My name is Katherine Gould, I am a resident of Milwaukee city, Milwaukee and live in St. Joseph's neighborhood which is very close to the proposed data center on 60th and Capitol.

I am writing to you to voice my concerns of the devastating impacts a data center would have on our community, neighborhood and city.

Data centers have been proven to decimate freshwater due to the cooling process that will diminish our beautiful states freshwater supply, not knowing what water they'd be sourcing, that could destroy our Great Lakes, our smaller lakes or rivers that feed into our ground water.

Data centers have been proven to devalue housing values, as a homeowner I do not want to see my property decrease in value and potentially be difficult to later sell if I choose to.

Data centers are not large employers and they drive up energy costs which will turn the burden onto residents. It's also not shocking the location of this proposed project and the demographics of that area. Would you like a data center to be built next to your neighborhood? Do you want your property value to decrease while energy costs rise??

I have been a long time resident of Milwaukee county since I moved here in 2010, I love this city and I implore you to listen to your constituents and community members on this matter as this will not benefit the community but only benefit the corporations.

Thank you,
Katherine Gould
