[You don't often get email from ashleyhietpas@everyactioncustom.com. Learn why this is important at <http://aka.ms/LearnAboutSenderIdentification>.]

Dear Ms. Linda Elmer,

I am writing to ask you to support File 211686, permanent historic designation of the 1919 Columbia Hospital building. As you know, UWM, as the current owners of this special place, have stated intentions to demolish the building in the near future. This important building is historically significant for many reasons: as an intact example of Georgian Revival architecture, a rare surviving example of 19th century hospital design ideals, a home to many significant medical breakthroughs and pioneers in Milwaukee history, and for its design by influential hospital designers Schmidt, Garden & Martin and prominent Milwaukee architects Eschweiler & Eschweiler. It is also an important place to the community today. Lives began, ended, and were saved within these halls. To allow this building to be demolished would erode the special history and architectural character of the neighborhood, which predates by 90 years the university's decade of ownership.

I believe this building still has useful life and the ability to benefit the community for many more years. Please consider that a 2014 study by Quorum Architects showed at that time that the building could be reused. Considering the regular successful rehabilitations of even older buildings throughout the City – including the 30-year vacant 1869 Old Main restored last year for housing at the Soldiers Home – I believe Columbia Hospital can also be saved.

To do so would be in accordance with the University's intentions when they purchased the building in 2010. Even if student housing or academic uses are difficult, alternatives such as senior, faculty, or graduate student housing may be possibilities. Historic Tax Credits could help make a restoration financially feasible. As it stands, the University has given no indication of intended future use for the site aside from an empty lot. If the Columbia Hospital were demolished, there would be no telling what might eventually take its place and no public input opportunity into the future use of the site.

In addition, sending this building to a landfill would directly contradict the goals of the University and the City to move toward a greener future. Landfills are filled with construction debris, take up important space in our City, and cost taxpayers money. 72% of a building's carbon footprint does not come from its energy usage but from its "embodied carbon": the impact of manufacturing, transporting, and constructing the building materials. A standard new building takes approximately 65 years of operation to recover the energy used in its construction through decreased carbon emissions. This is beyond the designed life of most new buildings, and thus most new buildings never regain the carbon expended in their construction. Reusing buildings rather than demolishing and building new is the environmentally responsible choice on every front, and we have a responsibility to future generations to make the environmentally responsible choice.

Ultimately, if designated, a public process would be established that would ensure that any future attempts to demolish this important publicly-owned property would need to go through a process giving the public an opportunity to weigh in. Public money purchased this building in 2010, has been used for 12 years for limited maintenance, and is now requested for demolition, squandering all previous investment. I would rather see my public money used to support our community, not demolish it, and I believe the public deserves a voice. I strongly encourage you to support Columbia

I would rather see my public money used to support our community, not demolish it, and I believe the public deserves a voice. I strongly encourage you to support Columbia Hospital's designation as a site with clear historic significance and value to the community, rather than its demolition and landfilling of its materials for an empty lot.

Why historically designate the Columbia Hospital?

It creates a public process before demolition and other exterior changes could be made to this public asset.
It has historic significance and value to the community.
Restoration rather than landfilling is the envi

Sincerely,

Natalie Carroll

Dear Ms. Linda Elmer,

Please support File 211686, permanent historic designation of the 1919 Columbia Hospital building.

When my husband and I moved into our house on Edgewood Avenue 37 years ago, one of the unexpected benefits we acquired was this renowned and beautiful hospital within walking distance of our home. This was especially helpful when my husband had an difficult surgery 17 years ago, requiring an extended hospital stay. Our 9-year-old grandson was with us at the time, and I could care for him after school, feed him, get him to bed, and with the help of neighbors who watched him, I could easily spend a couple of hours with my husband. This is just one, I'm sure, of hundreds of thousands of stories that could be told about the meaningful presence of this beautiful structure in our community.

I'm old enough to remember the historic buildings along Wisconsin Avenue that were demolished in the name of modernization. Please don't let the same fate befall this cherished site.

This important building is historically significant for many reasons: as an intact example of Georgian Revival architecture, a rare surviving example of 19th century hospital design ideals, a home to many significant medical breakthroughs and pioneers in Milwaukee history, and for its design by influential hospital designers Schmidt, Garden & Martin and prominent Milwaukee architects Eschweiler & Eschweiler. It is also an important place to the community today. Lives began, ended, and were saved within these halls. To allow this building to be demolished would erode the special history and architectural character of the neighborhood, which predates by 90 years the university's decade of ownership.

Please consider that a 2014 study by Quorum Architects showed at that time that the building could be reused. Considering the regular successful rehabilitations of even older buildings throughout the City – including the 30-year vacant 1869 Old Main restored last year for housing at the Soldiers Home – I believe Columbia Hospital can also be saved.

Sending this building to a landfill would directly contradict the goals of the University and the City to move toward a greener future. [You don't often get email from sarandall@everyactioncustom.com. Learn why this is important at <http://aka.ms/LearnAboutSenderIdentification>.]

Dear Ms. Linda Elmer,

I am writing to ask you to support File 211686, permanent historic designation of the 1919 Columbia Hospital building. As you know, UWM, as the current owners of this special place, have stated intentions to demolish the building in the near future. This important building is historically significant for many reasons: as an intact example of Georgian Revival architecture, a rare surviving example of 19th century hospital design ideals, a home to many significant medical breakthroughs and pioneers in Milwaukee history, and for its design by influential hospital designers Schmidt, Garden & Martin and prominent Milwaukee architects Eschweiler & Eschweiler. It is also an important place to the community today. Lives began, ended, and were saved within these halls. To allow this building to be demolished would erode the special history and architectural character of the neighborhood, which predates by 90 years the university's decade of ownership.

I believe this building still has useful life and the ability to benefit the community for many more years. Please consider that a 2014 study by Quorum Architects showed at that time that the building could be reused. Considering the regular successful rehabilitations of even older buildings throughout the City – including the 30-year vacant 1869 Old Main restored last year for housing at the Soldiers Home – I believe Columbia Hospital can also be saved.

To do so would be in accordance with the University's intentions when they purchased the building in 2010. Even if student housing or academic uses are difficult, alternatives such as senior, faculty, or graduate student housing may be possibilities. Historic Tax Credits could help make a restoration financially feasible. As it stands, the University has given no indication of intended future use for the site aside from an empty lot. If the Columbia Hospital were demolished, there would be no telling what might eventually take its place and no public input opportunity into the future use of the site.

In addition, sending this building to a landfill would directly contradict the goals of the University and the City to move toward a greener future. Landfills are filled with construction debris, take up important space in our City, and cost taxpayers money. 72% of a building's carbon footprint does not come from its energy usage but from its "embodied carbon": the impact of manufacturing, transporting, and constructing the building materials. A standard new building takes approximately 65 years of operation to recover the energy used in its construction through decreased carbon emissions. This is beyond the designed life of most new buildings, and thus most new buildings never regain the carbon expended in their construction. Reusing buildings rather than demolishing and building new is the environmentally responsible choice on every front, and we have a responsibility to future generations to make the environmentally responsible choice.

Ultimately, if designated, a public process would be established that would ensure that any future attempts to demolish this important publicly-owned property would need to go through a process giving the public an opportunity to weigh in. Public money purchased this building in 2010, has been used for 12 years for limited maintenance, and is now requested for demolition, squandering all previous investment. I would rather see my public money used to support our community, not demolish it, and I believe the public deserves a voice. I strongly encourage you to support Columbia

Hospital's designation as a site with clear historic significance and value to the community, rather than its demolition and landfilling of its materials for an empty lot.

Sincerely,

Stephanie Livingston

Dear Ms. Carlen Hatala,

Please support File 211686, permanent historic designation of the 1919 Columbia Hospital building.

When my husband and I moved into our house on Edgewood Avenue 37 years ago, one of the unexpected benefits we acquired was this renowned and beautiful hospital within walking distance of our home. This was especially helpful when my husband had an difficult surgery 17 years ago, requiring an extended hospital stay. Our 9-year-old grandson was with us at the time, and I could care for him after school, feed him, get him to bed, and with the help of neighbors who watched him, I could easily spend a couple of hours with my husband. This is just one, I'm sure, of hundreds of thousands of stories that could be told about the meaningful presence of this beautiful structure in our community.

I'm old enough to remember the historic buildings along Wisconsin Avenue that were demolished in the name of modernization. Please don't let the same fate befall this cherished site.

This important building is historically significant for many reasons: as an intact example of Georgian Revival architecture, a rare surviving example of 19th century hospital design ideals, a home to many significant medical breakthroughs and pioneers in Milwaukee history, and for its design by influential hospital designers Schmidt, Garden & Martin and prominent Milwaukee architects Eschweiler & Eschweiler. It is also an important place to the community today. Lives began, ended, and were saved within these halls. To allow this building to be demolished would erode the special history and architectural character of the neighborhood, which predates by 90 years the university's decade of ownership.

Please consider that a 2014 study by Quorum Architects showed at that time that the building could be reused. Dear Ms. Carlen Hatala,

I am writing to ask you to support File 211686, permanent historic designation of the 1919 Columbia Hospital building. As you know, UWM, as the current owners of this special place, have stated intentions to demolish the building in the near future. This important building is historically significant for many reasons: as an intact example of Georgian Revival architecture, a rare surviving example of 19th century hospital design ideals, a home to many significant medical breakthroughs and pioneers in Milwaukee history, and for its design by influential hospital designers Schmidt, Garden & Martin and prominent Milwaukee architects Eschweiler & Eschweiler. It is also an important place to the community today. Lives began, ended, and were saved within these halls. To allow this building to be demolished would erode the special history and architectural character of the neighborhood, which predates by 90 years the university's decade of ownership.

I believe this building still has useful life and the ability to benefit the community for many more years. Please consider that a 2014 study by Quorum Architects showed at that time that the building could be reused. Considering the regular successful rehabilitations of even older buildings throughout the City – including the 30-year vacant 1869 Old Main restored last year for housing at the Soldiers Home – I believe Columbia Hospital can also be saved.

To do so would be in accordance with the University's intentions when they purchased the building in 2010. Even if student housing or academic uses are difficult, alternatives such as senior, faculty, or graduate student housing may be possibilities. Historic Tax Credits could help make a restoration financially feasible. As it stands, the University has given no indication of intended future use for the site aside from an empty lot. If the Columbia Hospital were demolished, there would be no telling what might eventually take its place and no public input opportunity into the future use of the site.

In addition, sending this building to a landfill would directly contradict the goals of the University and the City to move toward a greener future. Landfills are filled with construction debris, take up important space in our City, and cost taxpayers money. 72% of a building's carbon footprint does not come from its energy usage but from its "embodied carbon": the impact of manufacturing, transporting, and constructing the building materials. A standard new building takes approximately 65 years of operation to recover the energy used in its construction through decreased carbon emissions. This is beyond the designed life of most new buildings, and thus most new buildings never regain the carbon expended in their construction. Reusing buildings rather than demolishing and building new is the environmentally responsible choice on every front, and we have a responsibility to future generations to make the environmentally responsible choice.

Ultimately, if designated, a public process would be established that would ensure that any future attempts to demolish

this important publicly-owned property would need to go through a process giving the public an opportunity to weigh in. Public money purchased this building in 2010, has been used for 12 years for limited maintenance, and is now requested for demolition, squandering all previous investment. I would rather see my public money used to support our community, not demolish it, and I believe the public deserves a voice. I strongly encourage you to support Columbia Hospital's designation as a site with clear historic significance and value to the community, rather than its demolition and landfilling of its materials for an empty lot.

Sincerely,
Ashley Hietpas

Dear Ms. Carlen Hatala,

When MENA worked with UWM to eliminate our objections for the zoning of this site we did not imagine that UWM would demolish this building. It is clear to see why UWM did not want this site under the jurisdiction of the city of Milwaukee.

I am writing to ask you to support File 211686, permanent historic designation of the 1919 Columbia Hospital building. As you know, UWM, as the current owners of this special place, have stated intentions to demolish the building in the near future. This important building is historically significant for many reasons: as an intact example of Georgian Revival architecture, a rare surviving example of 19th century hospital design ideals, a home to many significant medical breakthroughs and pioneers in Milwaukee history, and for its design by influential hospital designers Schmidt, Garden & Martin and prominent Milwaukee architects Eschweiler & Eschweiler. It is also an important place to the community today. Lives began, ended, and were saved within these halls. To allow this building to be demolished would erode the special history and architectural character of the neighborhood, which predates by 90 years the university's decade of ownership.

I believe this building still has useful life and the ability to benefit the community for many more years. Please consider that a 2014 study by Quorum Architects showed at that time that the building could be reused. Considering the regular successful rehabilitations of even older buildings throughout the City – including the 30-year vacant 1869 Old Main restored last year for housing at the Soldiers Home – I believe Columbia Hospital can also be saved.

It is also an important place to the community today. Lives began, ended, and were saved within these halls. To allow this building to be demolished would erode the special history and architectural character of the neighborhood, which predates by 90 years the university's decade of ownership.

I believe this building still has useful life and the ability to benefit the community for many more years. Please consider that a 2014 study by Quorum Architects showed at that time that the building could be reused. Considering the regular successful rehabilitations of even older buildings throughout the City – including the 30-year vacant 1869 Old Main restored last year for housing at the Soldiers Home – I believe Columbia Hospital can also be saved.

To do so would be in accordance with the University's intentions when they purchased the building in 2010. Even if student housing or academic uses are difficult, alternatives such as senior, faculty, or graduate student housing may be possibilities. Historic Tax Credits could help make a restoration financially feasible. As it stands, the University has given no indication of intended future use for the site aside from an empty lot. If the Columbia Hospital were demolished, there would be no telling what might eventually take its place and no public input opportunity into the future use of the site.

In addition, sending this building to a landfill would directly contradict the goals of the University and the City to move toward a greener future. Landfills are filled with construction debris, take up important space in our City, and cost taxpayers money. 72% of a building's carbon footprint does not come from its energy usage but from its "embodied carbon": the impact of manufacturing, transporting, and constructing the building materials. A standard new building takes approximately 65 years of operation to recover the energy used in its construction through decreased carbon emissions. This is beyond the designed life of most new buildings, and thus most new buildings never regain the carbon expended in their construction. Reusing buildings rather than demolishing and building new is the environmentally responsible choice on every front, and we have a responsibility to future generations to make the environmentally responsible choice.

Ultimately, if designated, a public process would be established that would ensure that any future attempts to demolish this important publicly-owned property would need to go through a process giving the public an opportunity to weigh in. Public money purchased this building in 2010, has been used for 12 years for limited maintenance, and is now requested for demolition, squandering all previous investment. I would rather see my public money used to support our community, not demolish it, and I believe the public deserves a voice. I strongly encourage you to support Columbia Hospital's designation as a site with clear historic significance and value to the community, rather than its demolition and landfilling of its materials for an empty lot.

Sincerely,
Jana Ranson

Subject: Please Support Permanent Historic Designation of Columbia Hospital, File 211686

Dear Mr. Chris Lee,

I know that not all buildings can - or even should - be preserved, but there are some remarkable structures that hold so much history, and are so significant that tearing them down would leave a huge hole in the fabric of our community and the generations to come I am writing to ask you to support File 211686, permanent historic designation of the 1919 Columbia Hospital building. As you know, UWM, as the current owners of this special place, have stated intentions to demolish the building in the near future. This important building is historically significant for many reasons: as an intact example of Georgian Revival architecture, a rare surviving example of 19th century hospital design ideals, a home to many significant medical breakthroughs and pioneers in Milwaukee history, and for its design by influential hospital designers Schmidt, Garden & Martin and prominent Milwaukee architects Eschweiler & Eschweiler. It is also an important place to the community today. Lives began, ended, and were saved within these halls. To allow this building to be demolished would erode the special history and architectural character of the neighborhood, which predates by 90 years the university's decade of ownership.

I believe this building still has useful life and the ability to benefit the community for many more years. Dear Mr. Chris Lee,

I am writing to ask you to support File 211686, permanent historic designation of the 1919 Columbia Hospital building.

The greenest building is the one that's already there. The hospital can most certainly be repurposed. It's a beautiful structure that looks at home in it's neighborhood and is worth having around a few more hundred years.

Once it's gone...it's gone. The building doesn't have to come down. It's a choice. Please choose the path of preservation with a repurposed interior.

Sincerely,
Rosalie Bredeck

Subject: Please Support Permanent Historic Designation of Columbia Hospital, File 211686

Dear Mr. Chris Lee,

I strongly believe that Columbia Hospital has been an architectural, historical and medical treasure of the East Side. It has been important to me as a patient, including twin sons who were born there 61 years ago, and as a fan of architecture. Later additions were designed by Eschweiler and Eschweiler who were known for their outstanding engineering and design. They built solidly. (I guest curated an exhibition about the founder Alexander Eschweiler in 2007.) Also important to me is that it was the only Protestant hospital in the area. Foremost it was a leader in several medical fields.

I do not understand why UWM cannot be creative in finding good use(s) for this handsome building. I urge the university to not just create a green space when its use could be redefined.

Sincerely,
Win Thrall

Landfills are filled with construction debris, take up important space in our City, and cost taxpayers money. 72% of a building's carbon footprint does not come from its energy usage but from its "embodied carbon": the impact of manufacturing, transporting, and constructing the building materials. A standard new building takes approximately 65 years of operation to recover the energy used in its construction through decreased carbon emissions. This is beyond the designed life of most new buildings, and thus most new buildings never regain the carbon expended in their construction. Reusing buildings rather than demolishing and building new is the environmentally responsible choice on every front, and we have a responsibility to future generations to make the environmentally responsible choice.

Ultimately, if designated, a public process would be established that would ensure that any future attempts to demolish this important publicly-owned property would need to go through a process giving the public an opportunity to weigh in. Public money purchased this building in 2010, has been used for 12 years for limited maintenance, and is now requested for demolition, squandering all previous investment. I would rather see my public money used to support our community, not demolish it, and I believe the public deserves a voice. I strongly encourage you to support Columbia Hospital's designation as a site with clear historic significance and value to the community, rather than its demolition and landfilling of its materials for an empty lot.

Do not waste a architectural gem on the east side. We are only care takers of a building. Sentencing it to death is a waste of previous labor, material, and money.

Sincerely,

Scott Fehr

1659 N Marshall St Milwaukee, WI 53202-2051 scottfehr@tds.net

Subject: Please Support Permanent Historic Designation of Columbia Hospital, File 211686

Dear Mr. Chris Lee,

I am writing to ask you to support File 211686, permanent historic designation of the 1919 Columbia Hospital building. As you know, UWM, as the current owners of this special place, have stated intentions to demolish the building in the near future. This important building is historically significant for many reasons: as an intact example of Georgian Revival architecture, a rare surviving example of 19th century hospital design ideals, a home to many significant medical breakthroughs and pioneers in Milwaukee history, and for its design by influential hospital designers Schmidt, Garden & Martin and prominent Milwaukee architects Eschweiler & Eschweiler. It is also an important place to the community today. Lives began, ended, and were saved within these halls. To allow this building to be demolished would erode the special history and architectural character of the neighborhood, which predates by 90 years the university's decade of ownership.

I believe this building still has useful life and the ability to benefit the community for many more years. Please consider that a 2014 study by Quorum Architects showed at that time that the building could be reused. Considering the regular successful rehabilitations of even older buildings throughout the City – including the 30-year vacant 1869 Old Main restored last year for housing at the Soldiers Home – I believe Columbia Hospital can also be saved.

To do so would be in accordance with the University's intentions when they purchased the building in 2010. Even if student housing or academic uses are difficult, alternatives such as senior, faculty, or graduate student housing may be possibilities. Historic Tax Credits could help make a restoration financially feasible. As it stands, the University has given no indication of intended future use for the site aside from an empty lot. If the Columbia Hospital were demolished, there would be no telling what might eventually take its place and no public input opportunity into the future use of the site.

In addition, sending this building to a landfill would directly contradict the goals of the University and the City to move toward a greener future. Landfills are filled with construction debris, take up important space in our City, and cost taxpayers money. 72% of a building's carbon footprint does not come from its energy usage but from its "embodied carbon": the impact of manufacturing, transporting, and constructing the building materials. Subject: Please Support Permanent Historic Designation of Columbia Hospital, File 211686

Dear Mr. Chris Lee,

I am writing to ask you to support File 211686, permanent historic designation of the 1919 Columbia Hospital building.

I worked in the hospital while I was an undergraduate at UWM, both in food service and as an oncology unit secretary. The architectural details of the historic building impressed me, as did the light filled rooms. Years later, two of my three children were born at Columbia Hospital.

As you know, UWM, as the current owners of this special place, have stated intentions to demolish the building in the near future. This important building is historically significant for many reasons: as an intact example of Georgian Revival architecture, a rare surviving example of 19th century hospital design ideals, a home to many significant medical breakthroughs and pioneers in Milwaukee history, and for its design by influential hospital designers Schmidt, Garden & Martin and prominent Milwaukee architects Eschweiler & Eschweiler. It is also an important place to the community today. Lives began, ended, and were saved within these halls. To: Lee, Chris
Subject: Please Support Permanent Historic Designation of Columbia Hospital, File 211686

Dear Mr. Chris Lee,

Dear Ald. Kovac,
Please support File 211686, permanent historic designation for the 1919 Columbia Hospital building.

It's a beautiful building -- notice its rounded south end -- and important in the community memory. People were born, died, or cured here; support groups met; and minor emergencies received prompt attention. For decades, it had a large maternity ward. My sister and brother were born here; my mother and her friends considered Dr. Gordon Burgess, OBGYN, to be legendary.

It was a handy hospital for the UWM community. While earning two degrees at UWM, I spent many hours waiting for the #30 bus across the street from the hospital. I first admired the building while attending Hartford Avenue School, kitty-corner from the hospital, for 7th and 8th grade cooking and sewing in the 1960s, and I attended Girl Scout meetings on Frederick Avenue, a half-block away. The hospital was a major, dignified presence in the neighborhood, and what went on there was respected and appreciated. It was arguably "the" top hospital in Milwaukee.

UWM, the owner, wants to tear it down, and have a vacant lot, a "green space," but the entire lawn of Sandburg Hall, across the street from it, is green space. The experts say that this building is a rare, surviving example of ideal, 19th century hospital design. With its undulating courtyards, every room has a window for fresh air. The 1919 architects were noted hospital designers Schmidt, Garden & Martin of Chicago. Medical breakthroughs happened here. Its presence has graced the neighborhood for over 100 years. It's a beautiful building, and what it represents is important.

I think this building could continue to benefit the community. Buildings older than 1919 have been returned to use: The 1869 Old Main building at the VA center / Milwaukee Soldiers Home was restored after being vacant for 30 years, and is now serving as veterans' housing.

When UWM bought the hospital building in 2010, it intended to reuse it. Reportedly, neighbors objected to undergraduate dormitory use, but it might serve as academic offices, or housing for faculty or graduate students. The concrete floors make it relatively soundproof, which might be suitable for music practice rooms.

Historic Tax Credits could help make a restoration financially feasible.

This building has stood strong for over 100 years. I cringe at the thought of sending its physical essence to a landfill. In terms of "carbon footprint," reusing buildings, rather than demolishing and building new is the environmentally responsible choice.

Historic designation will mean that a public process will be established to ensure that any future attempts to demolish this important publicly-owned property would need to go through a process giving the public an opportunity to weigh in. Public money purchased this building in 2010, has been used for 12 years for limited maintenance, and is now requested for demolition, squandering all previous investment. I would rather see my public money used to support our

community, not demolish it, and I believe the public deserves a voice. Please support Columbia Hospital's designation as a site with clear historic significance and value to the community, rather than its demolition and the landfilling of its materials for an empty lot.
Thank you.

Sincerely,

Gail Fitch

In addition, sending this building to a landfill would directly contradict the goals of the University and the City to move toward a greener future. Landfills are filled with construction debris, take up important space in our City, and cost taxpayers money. 72% of a building's carbon footprint does not come from its energy usage but from its "embodied carbon": the impact of manufacturing, transporting, and constructing the building materials. A standard new building takes approximately 65 years of operation to recover the energy used in its construction through decreased carbon emissions. This is beyond the designed life of most new buildings, and thus most new buildings never regain the carbon expended in their construction. Reusing buildings rather than demolishing and building new is the environmentally responsible choice on every front, and we have a responsibility to future generations to make the environmentally responsible choice.

Ultimately, if designated, a public process would be established that would ensure that any future attempts to demolish this important publicly-owned property would need to go through a process giving the public an opportunity to weigh in. Public money purchased this building in 2010, has been used for 12 years for limited maintenance, and is now requested for demolition, squandering all previous investment. I would rather see my public money used to support our community, not demolish it, and I believe the public deserves a voice. I strongly encourage you to support Columbia Hospital's designation as a site with clear historic significance and value to the community, rather than its demolition and landfilling of its materials for an empty lot.

Sincerely,
Andrew Swant

Subject: Please Support Permanent Historic Designation of Columbia Hospital, File 211686

Dear Mr. Chris Lee,

I am writing to ask you to support File 211686, permanent historic designation of the 1919 Columbia Hospital building. As you know, UWM, as the current owners of this special place, have stated intentions to demolish the building in the near future. This important building is historically significant for many reasons: as an intact example of Georgian Revival architecture, a rare surviving example of 19th century hospital design ideals, a home to many significant medical breakthroughs and pioneers in Milwaukee history, and for its design by influential hospital designers Schmidt, Garden & Martin and prominent Milwaukee architects Eschweiler & Eschweiler. It is also an important place to the community today. Lives began, ended, and were saved within these halls. To allow this building to be demolished would erode the special history and architectural character of the neighborhood, which predates by 90 years the university's decade of ownership.

I believe this building still has useful life and the ability to benefit the community for many more years. Please consider that a 2014 study by Quorum Architects showed at that time that the building could be reused. Considering the regular successful rehabilitations of even older buildings throughout the City – including the 30-year vacant 1869 Old Main restored last year for housing at the Soldiers Home – I believe Columbia Hospital can also be saved.

To do so would be in accordance with the University's intentions when they purchased the building in 2010. Even if student housing or academic uses are difficult, alternatives such as senior, faculty, or graduate student housing may be possibilities. Historic Tax Credits could help make a restoration financially feasible. As it stands, the University has given no indication of intended future use for the site aside from an empty lot. If the Columbia Hospital were demolished, there would be no telling what might eventually take its place and no public input opportunity into the future use of the site.

In addition, sending this building to a landfill would directly contradict the goals of the University and the City to move toward a greener future. Landfills are filled with construction debris, take up important space in our City, and cost taxpayers money. 72% of a building's carbon footprint does not come from its energy usage but from its "embodied carbon": the impact of manufacturing, transporting, and constructing the building materials. A standard new building takes approximately 65 years of operation to recover the energy used in its construction through decreased carbon emissions. Landfills are filled with construction debris, take up important space in our City, and cost taxpayers money. 72% of a building's carbon footprint does not come from its energy usage but from its "embodied carbon": the impact of manufacturing, transporting, and constructing the building materials. A standard new building takes approximately 65 years of operation to recover the energy used in its construction through decreased carbon emissions. This is beyond the designed life of most new buildings, and thus most new buildings never regain the carbon expended in their construction. Reusing buildings rather than demolishing and building new is the environmentally responsible choice on every front, and we have a responsibility to future generations to make the environmentally responsible choice.

Ultimately, if designated, a public process would be established that would ensure that any future attempts to demolish this important publicly-owned property would need to go through a process giving the public an opportunity to weigh in. Public money purchased this building in 2010, has been used for 12 years for limited maintenance, and is now requested for demolition, squandering all previous investment. I would rather see my public money used to support our community, not demolish it, and I believe the public deserves a voice. I strongly encourage you to support Columbia Hospital's designation as a site with clear historic significance and value to the community, rather than its demolition and landfilling of its materials for an empty lot.

It would be a devastating loss.

Sincerely,
Stephanie Van Alyea

Subject: Please Support Permanent Historic Designation of Columbia Hospital, File 211686

Dear Mr. Chris Lee,

I am writing to ask you to support File 211686, permanent historic designation of the 1919 Columbia Hospital building. As you know, UWM, as the current owners of this special place, have stated intentions to demolish the building in the near future. This important building is historically significant for many reasons: as an intact example of Georgian Revival architecture, a rare surviving example of 19th century hospital design ideals, a home to many significant medical breakthroughs and pioneers in Milwaukee history, and for its design by influential hospital designers Schmidt, Garden & Martin and prominent Milwaukee architects Eschweiler & Eschweiler. It is also an important place to the community today. Lives began, ended, and were saved within these halls. To allow this building to be demolished would erode the special history and architectural character of the neighborhood, which predates by 90 years the university's decade of ownership.

I believe this building still has useful life and the ability to benefit the community for many more years. Please consider that a 2014 study by Quorum Architects showed at that time that the building could be reused. Considering the regular successful rehabilitations of even older buildings throughout the City – including the 30-year vacant 1869 Old Main restored last year for housing at the Soldiers Home – I believe Columbia Hospital can also be saved.

To do so would be in accordance with the University's intentions when they purchased the building in 2010. Even if student housing or academic uses are difficult, alternatives such as senior, faculty, or graduate student housing may be possibilities. Historic Tax Credits could help make a restoration financially feasible. As it stands, the University has given no indication of intended future use for the site aside from an empty lot. If the Columbia Hospital were demolished, there would be no telling what might eventually take its place and no public input opportunity into the future use of the site.

In addition, sending this building to a landfill would directly contradict the goals of the University and the City to move toward a greener future. Landfills are filled with construction debris, take up important space in our City, and cost taxpayers money. 72% of a building's carbon footprint does not come from its energy usage but from its "embodied carbon": the impact of manufacturing, transporting, and constructing the building materials. A standard new building takes approximately 65 years of operation to recover the energy used in its construction through decreased carbon emissions.
