

A. Guidelines for New Construction

There has been very little new construction in North Point North. Only twelve buildings have been constructed since 1940. These were small apartment buildings, rowhouses or single-family residences. Only five original residences had to be demolished to accommodate these structures. It is important that additional new construction be designed so as to harmonize with the character of the district.

1. Siting

New construction must reflect the traditional siting of buildings in North Point North. This includes setback, spacing between buildings, the orientation of openings to the street and neighboring structures, and the relationship between the main building and accessory buildings.

2. Scale

Overall building height and bulk; the expression of major building divisions including foundation, body and roof; and, individual building components such as porches, overhangs and fenestration must be compatible with the surrounding structures.

3. Form

The massing of new construction must be compatible with the surrounding buildings. The profiles of roofs and building elements that project and recede from the main block must express the same continuity established by the historic structures.

4. Materials

The building materials that are visible from the public right-of-way should be consistent with the colors, textures, proportions, and combinations of cladding materials traditionally used in North Point North. The physical composition of the materials may be different from that of the historic materials, but the same appearance should be maintained.

B. Guidelines for Demolition

Although demolition is not encouraged and is generally not permissible, there may be instances when demolition may be acceptable, if approved by the Historic Preservation Commission. The Commission shall take the following guidelines, with those found in subsection 9(h) of the ordinance, into consideration when reviewing demolition requests.

1. Condition

Demolition requests may be granted when it can be clearly demonstrated that the condition of a building or a portion thereof is such that it constitutes an immediate threat to health and safety.

2. Importance

Consideration will be given to whether or not the building is of historical or architectural significance or displays a quality of material and craftsmanship that does not exist in other structures in the area.

3. Location

Consideration will be given to whether or not the building contributes to the neighborhood and the general street appearance and has a positive affect on other buildings in the area.

4. Potential for Restoration

Consideration will be given to whether or not the building is beyond economically feasible repair.

5. Additions

Consideration will be given to whether or not the proposed demolition is a later addition that is not in keeping with the original design of the structure or does not contribute to its character.

6. Replacement

Consideration will be given to whether or not the building is to be replaced by a compatible building of similar age, architectural style and scale or by a new building that would fulfill the same aesthetic function in the area as did the old structure (see New Construction Guidelines).
