OFFICE OF  
CITY ATTORNEY

Hello City Clerk,

On February 20, 2005 I was walking to the 41<sup>st</sup> street store through the alley on city property about 3pm. I slipped and fell on water and ice that was in the alley behind Howard Jansen Day Treatment School address 3909 W. Lisbon Ave; Milwaukee, WI 53208 phone number (414) 342-2060. Due to the fall I have a broken ankle, a torn ligament on my left leg and surgery done on my ankle.

Thank you,

Johnny Bryant

**ORDERING PHYSICIAN:** Dr. Jacqueline Mlsna  
**OCCURRENCE NUMBER:** 80318691

**EXAM DATE:** 03/02/2005

**EXAM LOCATION:** St. Joseph Regional Medical Center

**EXAM:** THREE VIEW OF THE LEFT ANKLE, AP, LATERAL AND OBLIQUE - 1400 HOURS

**COMPARISON:** February 28, 2005.

**INDICATION FOR EXAM:** Fracture of left ankle. Evaluate.

**FINDINGS:** Cast material is present overlying the left ankle, obscuring bony detail.

There is re-demonstration of the comminuted fracture through the lateral malleolus extending above the tibia-fibular syndesmosis. The syndesmosis is widened and appears slightly more widened than on the previous exam. There is interval increase in the widening of the medial ankle mortise. No new fracture is identified.

**IMPRESSION:**

1. Interval increase in the widening at the tibia-fibular syndesmosis and at the medial ankle mortise as described above.
2. Stable alignment of the comminuted lateral malleolus fracture.

**HISTORY OF PRESENT ILLNESS:** The patient comes in in follow up of his lateral malleolus fracture. He says he continues to have some pain.

**CURRENT MEDICATIONS:**

**PHYSICAL EXAMINATION:** Physical examination shows the wound is healing well without evidence of infection. The staples were removed and the wound redressed. Swelling is moderate.

X-rays taken today show overall alignment is unchanged. The mortise is maintained.

The patient is getting along reasonably well. A short leg cast was applied today. He is to remain nonweightbearing.

**IMPRESSION:**

**PLAN:** I will see him again in 4 weeks for x-ray exam. He was given a renewal on his Vicodin.

OCCURRENCE NUMBER: 80783816

EXAM DATE: 03/16/2005

EXAM LOCATION: St. Joseph Regional Medical Center

EXAM: THREE VIEW LEFT ANKLE SERIES

HISTORY: Fracture repair, followup.

INTERPRETATION: Compared with 03/04/2005, two metallic pins continue to secure the oblique fracture involving the distal left fibula in excellent apposition and without significant angulation or malalignment. There is no loosening of the metallic pins or wires.

The ankle mortise is not widened.

**DATE OF SERVICE:** 03/02/2005

Mr. Bryant is a 44-year-old man who comes in after having injured his left ankle over the weekend when he slipped on some ice. He was seen in the emergency room and splinted and presents now for further evaluation and treatment. He denies any other injuries.

**PAST MEDICAL HISTORY:** He states that he is otherwise healthy, although he admits to some type of psychiatric diagnosis, it appears that he may have a mild degree of mental retardation.

**MEDICATIONS:** Vicodin.

**ALLERGIES:** None known.

**HABITS:** He denies use of tobacco or significant use of alcohol. He denies use of drugs.

**REVIEW OF SYSTEMS:** Is obtained, but is noncontributory.

**PHYSICAL EXAMINATION:** Shows the ankle is quite swollen both medially and laterally. The skin, however, is intact. There is no proximal tenderness. The ankle appears to be unstable by exam.

X-rays taken in the emergency room demonstrate a displaced lateral malleolus fracture. The medial clear space is not certainly widened, although the lateral view suggests some subluxation. X-rays repeated today show a significant medial clear space widening with displacement of his lateral malleolus fracture.

**IMPRESSION:** Unstable lateral malleolus fracture.

**RECOMMENDATIONS:** I offered this patient surgical procedure today as he has been made NPO, however, appropriate time was not available. Therefore, he will be admitted within the next 48 hours for surgical treatment of his problem. The risks and potential complications associated with surgery to include medical or anesthetic complications of a significant degree - DVT, pulmonary embolus, infection, and consequence of failure, fixation, and failure of the operation to achieve its desired result. This was discussed in the presence of his friend with whom he lives. They both appear to understand and appear to be reasonably able to make

decisions with reference to medical care. Appropriate arrangements were made for surgery. In the meantime a short leg cast is applied. He is asked to elevate the extremity and states that he has insufficient pain medication to get him through until to Friday, and so another prescription for Vicodin is dispensed, #80.
