

ATTACHMENT B

SAMPLING PLAN

The City's contractor shall take a soil sample in the approximate center of the area depicted in yellow on Attachment A. A visual examination of the soil sample will be performed by the City's contractor and Wisconsin Paperboard's contractor, to determine the depth of fill material to be removed. Additional soil samples will be obtained at approximately 5 foot increments in four directions from the initial sample and will be visually examined by the city's contractor, and Wisconsin Paperboard's contractor, to determine the depth of fill material to be removed.

The City's contractor, and Wisconsin Paperboard's contractor, shall agree on the final parameters of the excavation, based upon visual observations of the soil samples. The City or its contractor shall prepare a written drawing of the final parameters of the excavation, which shall be approved by Wisconsin Paperboard prior to performance of the excavation work.
