

## NARRATIVE FOR CHANGES TO CENTRAL GREENS,LLC

- 1) The West and North Elevation are changed to include a 4' Energy wall.
- 2) Roof line is changed to a 4/12 pitch.
- 3) The building North Elevation side wall is changed to 10' high and will be the same height all the way across the building.
- 4) The roof line will be the same all the way across the building. Originally this was 30' it will now be 88'. This was originally poly carbonate for part of the roof.
- 5) The North side wall is changed from a 30' solid wall to a 50' solid wall. This will allow for the additional needed space for the fish house and mechanicals. This will also allow us to increase our energy efficiency and increase our crop production. This is a change that was recommended by our Consultants.
- 6) There will be additional landscaping on the North Elevation.
- 7) All other elevations, and site improvements will remain the same as previously approved.

Thank you for your consideration.
