Re: Milwaukee Metropolitan Sewerage District Support of We Energies  
file number 241873

To Whom It May Concern:

We Energies is proposing to redevelop the stationary wastewater tanks at Valley Power Plant in Milwaukee, and we are writing to express our support of the project.

The proposed We Energies project would replace an existing tank, four semi-permanent Frac tanks and seven temporary Frac tanks, which have a current combined capacity of 351,000 gallons, with a new permanent Frac tank with a capacity of 625,000 gallons.

The Milwaukee Metropolitan Sewerage District (MMSD) works closely with Valley Power Plant to curtail wastewater during large rain events. This proposed project would ensure We Energies' ability to hold back wastewater discharges during significant rain events and help MMSD minimize the risk of combined sewer overflows.

Again, MMSD supports We Energies' application for the proposed Valley Power Plant stationary wastewater tank project.

Sincerely,

Kevin L. Shafer, P.E.  
Executive Director
