The gas meter is leaking on WE Energies side of the meter INSIDE our house. For safety reasons, WE Energies has recommended locating the meter outside the residence. This is because a leak on the high pressure side, i.e. their side of the meter, can be catastrophic.

The appearance of the house is very important to Anne and I. We have asked and received permission from WE Energies to locate the meter behind shrubs as shown on the first picture. The meter is currently immediately inside the basement wall behind the proposed location. The other two pictures show that locating the meter on either side is not practical due to drive ways and walking area. The rear of the house would not be practical as well due to the exterior concrete and location of piping inside the home.

The gas meter would be in this location, but behind the shrubs. Shrubs would be maintained slightly higher to ensure it is hidden.
