**Proposal** Install 16 solar energy panels on the south slope of the house roof. Install required electrical interconnect equipment on rear wall of house.

**Staff comments** A viable solar energy installation on this home is substantially only available in the location proposed. Public visibility may be high because of the roof slope. Staff requested a slight change in panel arrangement to reduce visibility from the sidewalk. The installer was able to make that the requested adjustment moving two panels to a position that is only viewable from an alley. As such, staff recommends approving the installation under the revised plans.

**Recommendation** Recommend HPC Approval
