Hello relevant parties,

The following is my comments and testimony about the proposed Data center project. There is no universe in which adding a data center at that location would be beneficial to the community or the state of Wisconsin.

While the location itself may be sitting empty and dormant, the increase in traffic related to construction would cause back ups no matter what season it is.

This will increase noise pollution, full standard pollution, and will cause sewer related issues. Assuming the water is going to be pulled from lake Michigan, this will not only affect the neighboring communities but the entire state. If you think the Milwaukee sewer system is built for this, I want you to remember the massive flooding that happened last year were in cars were completely buried in water. Adding the load of a data center will only increase that flooding, causing more homelessness.

Additionally, this is clearly just an attempt to disenfranchise and otherwise damage a predominantly black community in one of if not the most segregated city in the United States of America. In no world will this bring jobs as they will only bring in their own experts and it will not cause huge booms for the state as it will only drain our natural resources, our nonrenewable resources, and will fully destroy a neighborhood that is already neglected due to racism.

Choosing to build a data center here is one of if not the most racist option that could happen in Wisconsin. Wisconsin doesn't need a data center and the predominantly black neighborhood in Milwaukee does not need a data center. It will only lead to pollution of all types, damage to the existing infrastructure, massive striking, and I can only assume riots and/or physical backlash as well.

Do not approve the status center especially since the bubble is clearly going to pop soon. Any tax breaks wasted for this will only be wasted further instead of actually giving them to the communities that need it.
