A question. Why is the HPC discussing this item on the Jan 10 agenda when the reconstruction today from WE Energies about follow-up work to the reconstruction next door?

How has the HPC been involved in this project which seems to be complete or close to completion? If there's been oversight, I have no objection. I have an objection if there's been no oversight, as I trust the HPC to provide that. What are the next steps if work has been completed and is not up to standards?

I have not been able to access the project file(s) provided in the letter you sent me, so I am not able to review materials; regardless, I do not have the technical competence to make any judgments on the work that has been done. I trust you do.

Thank you for your attention.
