

Existing Concrete Driveway: Facing West from Front of house

Rear Driveway: Existing Tile - Facing East

Rear Driveway – Condition Photos – showing tile deterioration:

Dirt area where pad will be poured for storage of carts. Note that currently they are on mud between the trees. Pad will be hidden by portico so carts will be concealed from the street.

Front Patio showing deterioration – Note paving stones connecting patio to driveway.

Rear patio showing deterioration and weird tree planters

Aerial view showing how current rear patio juts out into driveway area

Rear Patio showing proposed outline of rear patio. This shape will have approximately the same (likely more!) usable space as currently, will not block the rear door, and will allow for much easier access to the garage as the trees will not be sticking out. It will be at the same height as the current patio so as to allow for access from the French doors on the right, as well as the sliding door.

This area will have inset colored concrete to set off portico/front door. The square of concrete will be approximately 1.5 – 2 feet in from the walls of the portico.
