September 27, 2019

Central City Cyberschool 4301 North 44<sup>th</sup> Street Milwaukee, WI 53216

The City of Milwaukee Health Department (MHD) conducted water sampling as stated in Common Council Resolution File Number 171520. The collected water samples were analyzed for lead to determine if there were any detected lead levels in the water outlets. All sampling procedures were done according to the United States Environmental Protection Agency (EPA) 3Ts for Reducing Lead in Drinking Water in Schools Guidance (3Ts).

Sampling and Testing

The collection of the samples took place on the morning of March 23, 2019 and April 10, 2019. A total of 93 water outlets were sampled in the school. Each outlet was tested twice, the second sample was taken after the after the water was run for 30 seconds after the first draw. The water was stagnant for a minimum of 8 hours, 250 milliliter (mL) water samples were collected before the water was used in the building. Each sample was labeled with the location, date, and time sampled. After finishing the sample collection, the samples were submitted to the City of Milwaukee Health Department Laboratory, a certified drinking water laboratory (ID: 241311290) with the Wisconsin Department of Natural Resources, for lead analysis.

#### Results

Please see the attached Water Sample Results Table for a summary of the water sample results. **26** samples had detectable levels of lead ranging from 1.0  $\mu$ g/L (micrograms per liter) to 4.9  $\mu$ g/L. However, **13** samples had detectable levels of lead ranging greater than 5.0  $\mu$ g/L. The rest of the outlets had lead levels below 1.0  $\mu$ g/L.

There is no safe level of lead in water. MHD provides recommendations for each outlet on the attached Water Sample Results Table. Any water outlet designed specifically for drinking (e.g. bubbler, water fountain, etc.) that has detectable levels of lead should be taken out of service, install a certified drinking water filter for lead removal, or provide bottled water from a lead-free source. Any water outlet that is not designed specifically for drinking (e.g., sink, washbasin, etc.) that has detectable levels of lead should be considered for placarding if the lead level is less than  $5.0 \mu g/L$ , and must be placarded (or, alternatively, filtered or removed from service) for levels higher than  $5.0 \mu g/L$ . Any remediation activities or additional water samples that may need to be completed will be done at the cost of the school and/or the property owner.

The only way to determine if a child has been lead poisoned is to have their blood tested. Parents/Guardians can have their child tested at their primary care physician. MHD recommends that a child be tested for lead three times before the age of three. If children weren't tested before the age of three, MHD recommends testing children up to the age of six. For older children, parents should talk to their medical provider about their child's exposure risk.

Please share these results with Parents/Guardians, staff, and students. As stated in the 3Ts, Parents/Guardians, staff, and students should be notified of the water testing and the testing results. If there are any questions regarding lead poisoning, please contact the MHD Childhood Lead Poisoning Prevention Program at 414-286-2165 or go to <a href="https://www.leadsafeMKE.com">www.leadsafeMKE.com</a>. If there are any questions or concerns about your results or remediation options, please call me at (414) 286-3451.

Sincerely,

Ofelia R. Mondragon, BBM

Home Environment Health Manager

Bubbler 30 sec flush

### Chemistry

TEST-NAME	RESULT	AB	NRML-RANGE	UNITS	DATE-TIME
Lead in Water					
Sample	*<1.0			ug Pb/L	04/30/19 14:37
Test Method	*see below				04/30/19 14:37

Reference Method of Analysis: SM 3113B

LOD: 0.31 ppb (ug/L) LOO: 1.03 ppb (ug/L)

EPA Treatment technique (TT) Action Level: 15 ppb (ug/L)

DNR Certification Number: 241311290

Legends: L-Low, H-High, AB-Abnormal, P-Panic, C-Critical, X-Extreme

Sanjib Bhattacharyya, Ph.D.
